

SmartHire

An Intelligent Job Discovery & Application Tracker

Mini Project Presentation

Presented by Vikash Kumar Mishra | B.Sc. IT | 2026

Search • Match • Save • Apply • Track

1. Problem Statement

Why job seekers need a simpler workflow

1

Scattered job discovery

Users search across multiple platforms and spend time comparing openings.

2

Limited personalization

Generic listings do not always reflect a candidate's skills and preferences.

3

Application follow-up

After applying, it can be difficult to remember status, deadlines and next steps.

Project idea

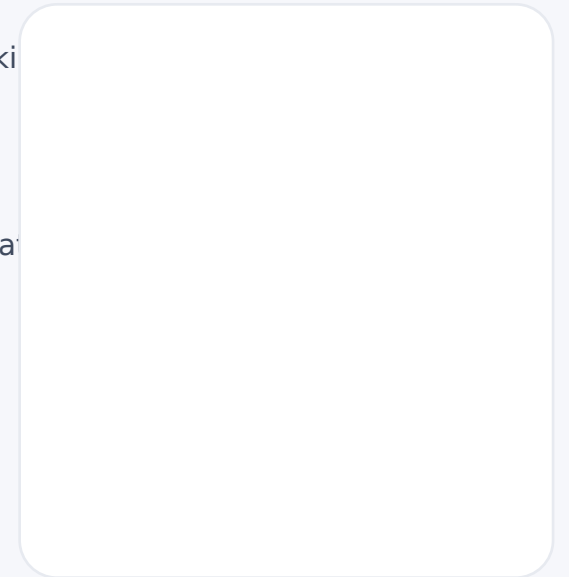

Bring job search and application tracking into one simple interface.

Use profile data to rank relevant opportunities and reduce search effort.

2. Project Objectives

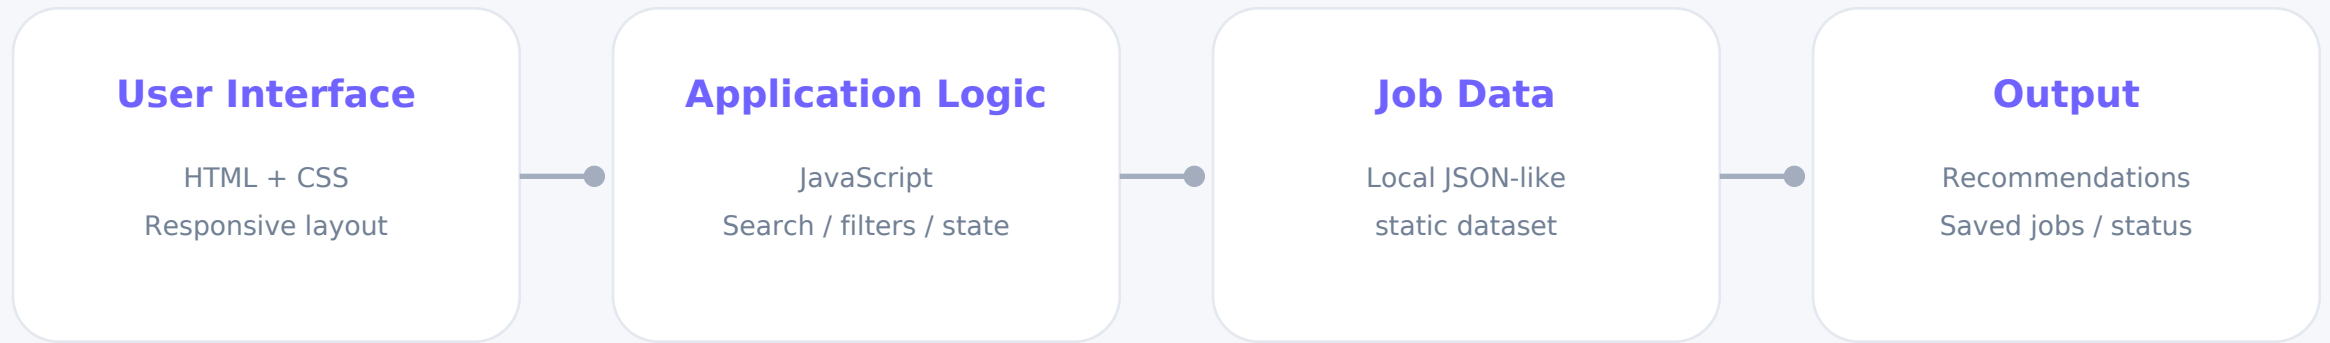

What SmartHire demonstrates

- Provide a clean dashboard for job seekers
- Filter by location and employment type
- Allow users to save and review job details
- Show candidate profile and career preferences
- Enable fast search using keywords, skills
- Recommend jobs using profile/skill match
- Provide a simple application tracker

3. System Design

Simple front-end architecture suitable for a mini project

4. User Workflow

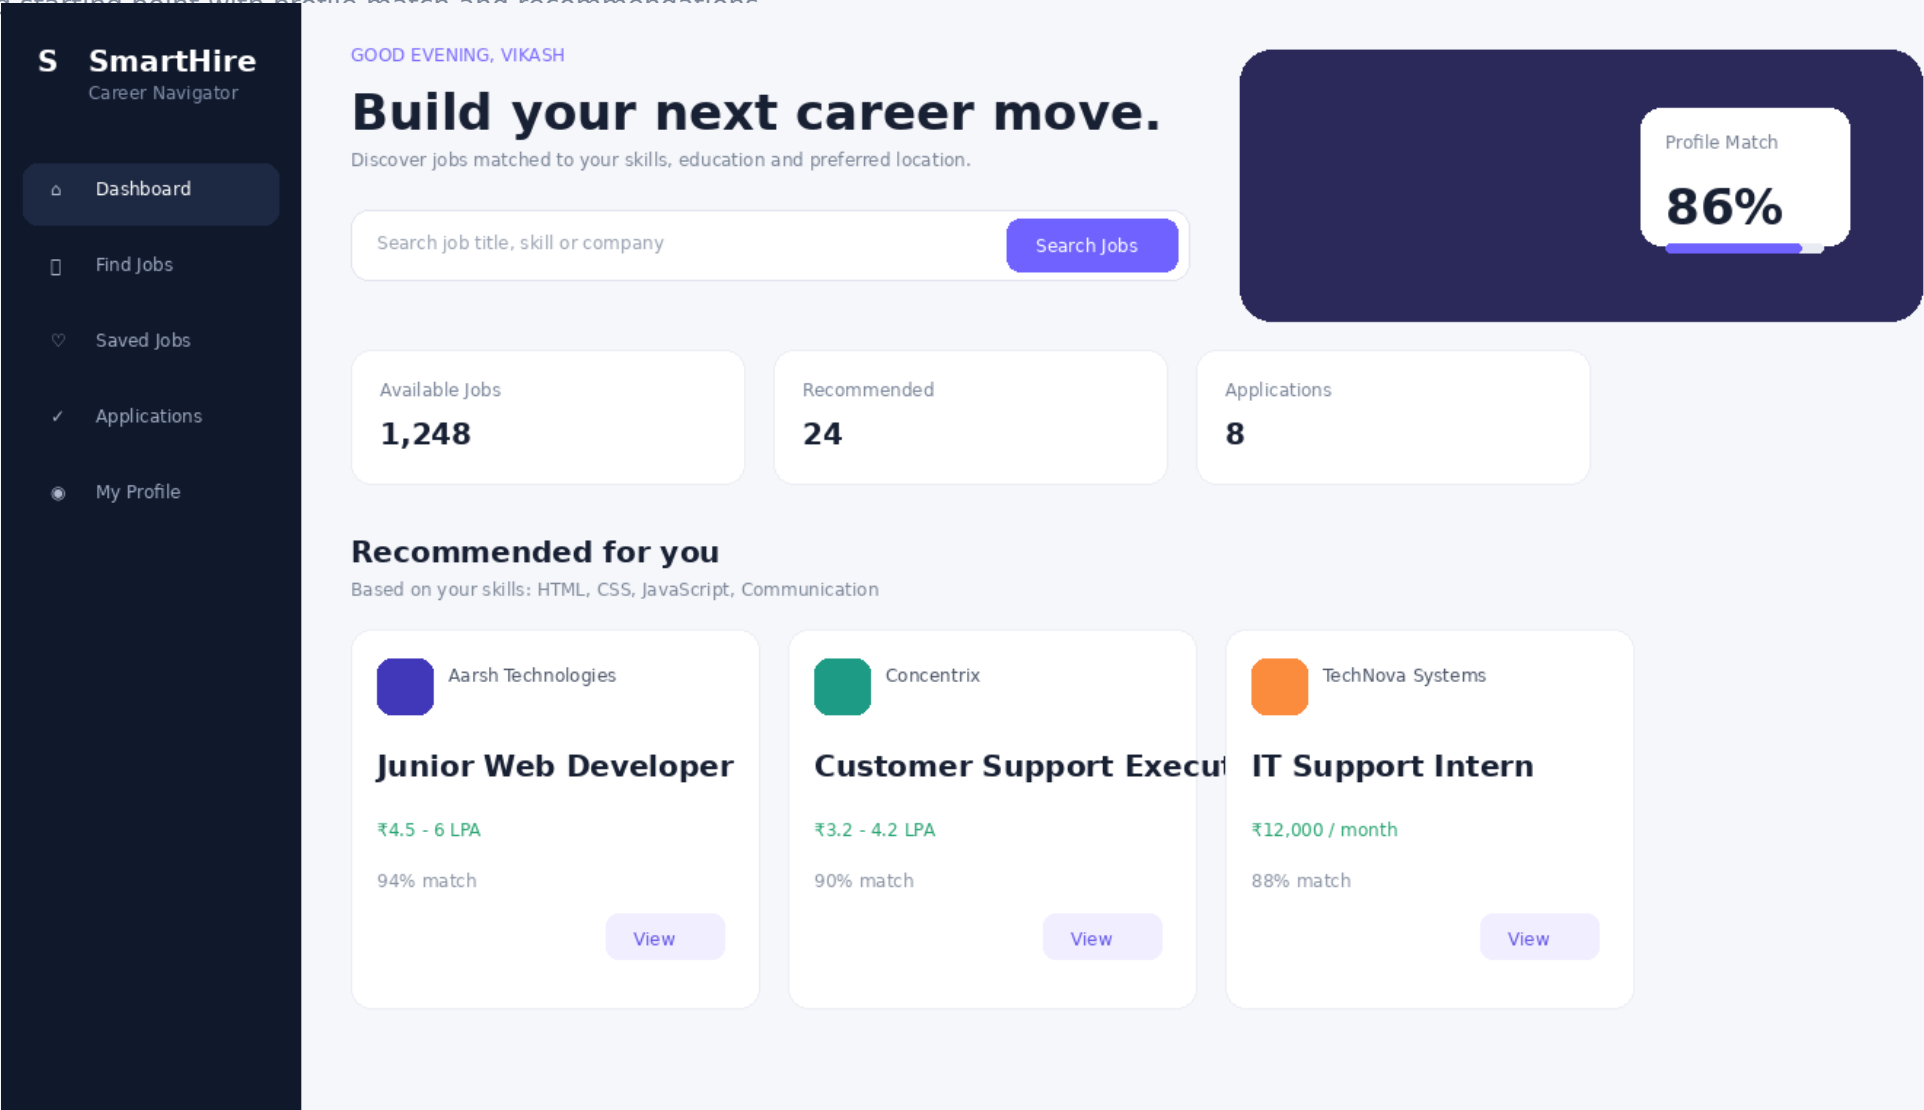

E
